COMMENT

clone. It may clone sections neighboring data submissions. This sequence may not represent the entire insert of this be shorter because we only sequence overlapping once, or longer because we provide a small over overlap

Center project name: H\_NH0311B14

all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >: 0); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by This sequence all regions restriction digest. sequence was finished as follows unless otherwise noted:

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D.
McPherson, Department of Genetics, Washington University, St. Louis
MC. For additional information about the map position of this
MO. For additional information about gecupance, see http://genome.wustl.edu/gsc

## SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E. Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org pBACe3.6

## NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the right is RP11-542H1, 200 base pair overlap; the clone sequenced to the left is RP11-292A10, 200 base pair overlap. Actual start of this clone is at base position 1 or RP11-311B14; actual end is at base position 23376 of RP11-542H1. ) base n 1 of

RP11-311B14 contains a transposon in the has not been included in the submitted so would insert after base position 212. base position sequence. growth Q. the clone which The transposon

which is not represented in the the from base position he full sequence of 113 to 25636 it's neighbor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Penn

The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancer such as lymphoma, leukaemia and myeloma. The present sequence is one of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is one of the probes of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements) fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABS25011-ABS51005 represent human liver single exon nucleic acid probes of the invention. Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at

CC incleaic acid probes for measuring gene expression in a sample derived (Cf from human lung comprising single exon nucleic acid sequences mentioned in the specification, or their (CC complements or the 12387 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a nucleic (C acid expressed in the human lung, measuring gene expression in a sample (CC derived from human lung, comprising (a) contracting the array with a collection of detectably labeled nucleic acids derived from human lung array, identifying exons in a eukaryotic genome, comprising (a) carray; identifying exons in a eukaryotic genome, comprising (a) carray; identifying exons in a eukaryotic genome, comprising (a) comprising (a) detectably because and (b) measuring the teatray assigning exons from genomic sequences of the exaryotic and (b) detecting specific hybridisation of detectably (CC labeled nucleic acids from eukaryote lung mRNA, to a single exon probe, (CC comprising (a) identifying exons from genomic sequence by the method (CC in the above mentioned microarray; assigning exons to a single exon probe above and (b) measuring the expression of each of the exons in several (CC in the above mentioned in the specification, or encoded by the exons should be assigned to a single gene, a peptide comprising one (c) fizell sequences, mentioned in the specification, or encoded by the constructive pulmonary disease such as asthma, lung (c) disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis, (CC pullak syndrome, sarcoidosis, pulmonary fibrosis, neurofibromatosis, (CC ancer, chronic obstructive pulmonary diseases such as asthma, lung (c) disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis, (CC pullak syndrome, sarcoidosis, pulmonary fibrosis, neurofibromatosis, (CC pullak syndrome, sarcoidosis, pulmonary fibrosis, neurofibromatosis, (CC pullak syndrome, sarcoidosis, pulmonary fibrosis, neurofibromatosis, (CC pul

                                                                                                                                                                                                                                                                                                           microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells.

                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
